

KARUISHI™

‘Warmth for a life well-lived.’

LIGHT & WARM

SMOOTH & LUXURY

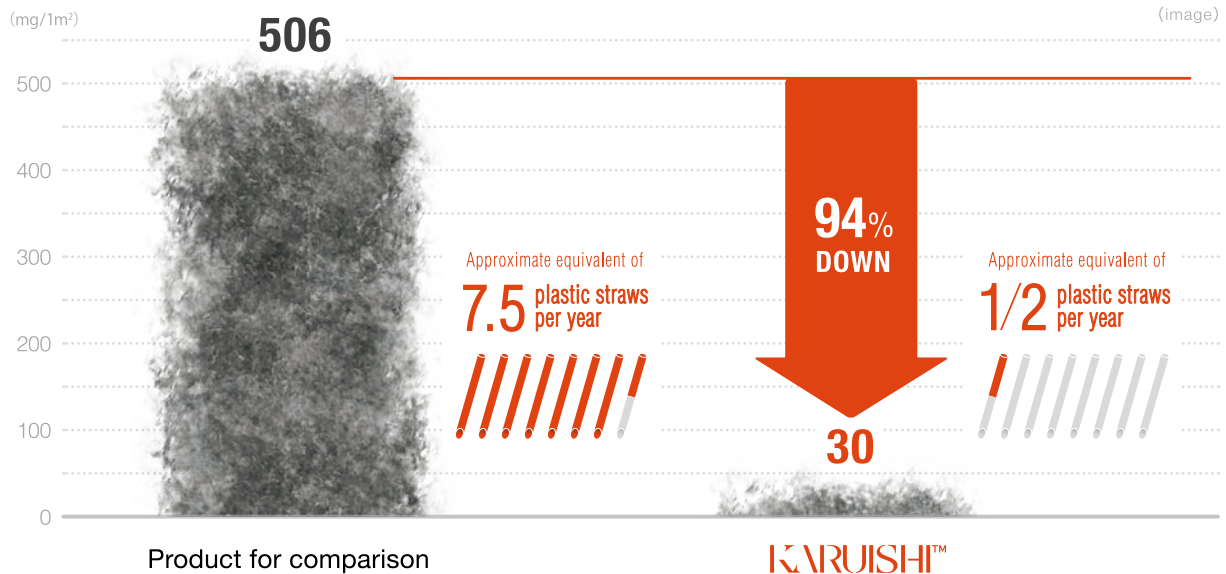

DURABLE & LONGLIFE

Improved durability and pilling resistance with dramatically reduced levels of Microplastic sheddings.

Minimizes microplastics emissions

Synthetic fibers dislodged from washing textiles cause microplastics that pose harm to the environment. KARUISHI™ features a unique double-knit construction that minimizes loose fibers shedding from the fabric.

Total quantity of fibers shed after 5 wash cycles

* Comparison tested using a Toray method * Converted into a value for once-a-week washing

Reduces environmental impact

Raw materials produced through regeneration recycling

The textile evolution starts from raw materials

Raw materials
Scrap film
Scrap fiber
